

# Acorn Superglide Perch StairLift

**Do you have problems bending your knees?  
Is your staircase exceptionally narrow?**

If you answered yes to one of the questions above, then an Acorn Superglide Perch Stairlift could be the answer to helping you get around all the floors in your home.

Occasionally, it is not possible to use the standard **Acorn Superglide Stairlift**. Perhaps this is because the stairs are exceptionally narrow, or because the user's legs will not bend enough to allow them to sit down on the stairlift.

Acorn has especially developed the **perch stairlift** to overcome this problem.

The perch model is easily operated by the remote control system, or alternatively with the 'wander lead' control which can be positioned for your maximum comfort and ease of operation. As with all Acorn stairlifts, the perch model is available now for rapid installation.

## Acorn Superglide Perch StairLift Technical Specification
