

Modular
socket vacuum
chamber.

5280 PROSTHETICS, LLC | 1-800-460-0288

Introducing the industry's first modular socket vacuum chamber.

The AIRPUCK™ system is a cost effective vacuum reservoir that can be connected to any external vacuum source to maintain negative pressure within the prosthetic socket for extended periods of time.

- ▶ Interchangeable with SMARTPUCK™
- ▶ Completely self-contained... No hoses, wires or charge ports
- ▶ Easy fabrication with no external porting into the socket required
- ▶ Internal negative pressure tank to extend vacuum life
- ▶ Free flow or check valve option
- ▶ Cosmetic cover friendly
- ▶ Completely modular and can be transferred from socket to socket
- ▶ Self sealing socket mechanism creates an airtight seal with every installation
- ▶ Works great with thermoplastic or laminated socket configurations
- ▶ Reduced build height
- ▶ Structural attachment point for componentry
- ▶ No noise emissions

The AIRPUCK™ system is designed to work with Trans-Femoral and Trans-Tibial Sockets
