

“It is important that treatment decisions are made by both the doctor and the patient together. I will always discuss multiple treatment options with you and list the potential advantages and disadvantages of each option so we can decide what is best together”.

Get to know more about your podiatrist...

Jeffrey D Lehrman, DPM, FASPS, MAPWCA, CPC

A Love For Education

The training that I completed both in earning my degree and in keeping current ever since provides me with the tools to care for any foot and ankle condition. I also now train the next generation of podiatrists in my role as an Adjunct Clinical Professor at the Temple University School of Podiatric Medicine.

Post Graduate Training: Hyperbaric Medicine Principles and Practice, Essentials of Circular Fixation in the Foot and Ankle, Foot and Ankle Applications of the Ilizarov External Fixation Method, AO Course – Principles of Operative Fracture Management in Davos, Switzerland

Board Certified: American Board of Foot & Ankle Surgery

Podiatric Surgical Residency: Crozer-Keystone Health System
Chester, PA

DPM degree: Kent State University College of Podiatric Medicine, 2001

BS: Biology major and Sociology minor, Ursinus College
Collegeville, PA 1997

Patient Centered Care

There should never be a situation where a doctor dictates care to a patient or tells the patient what they “have” to do. These decisions should be made together with the doctor and patient collaborating so that evidence-based medicine can be combined with the patient’s perspective to decide what is best. We will always discuss different options and their potential advantages and disadvantages.

Philosophy of Care

We will always discuss your diagnosis, what may have caused it, treatment options, and what can be done to prevent it from recurring. The goal will always be not only to make you better, but to KEEP you better! Sometimes treating the acute problem is easy, but the focus must also be on preventing it from coming back. Whenever possible, I think it is important to exhaust all nonsurgical treatment options before even discussing surgery. Questions are always welcome as the more informed you are, the better you can participate in your care and the better are our chances for success together!
