-Advanced training in treatment and reconstruction of pediatric and adult deformities

Board Certification: American Board of Foot and Ankle Surgery (2013)

Fellow: Association of Extremity Nerve Surgeons (2014-present)

Professional Interests

One of the very best parts of my profession is the wide variety of issues I regularly get to treat. Problems ranging from warts to tendonitis to broken bones are all par for the course and you can never tell what may be waiting in the next treatment room.

As a member and fellow of the Association of Extremity Nerve Surgeons (AENS) I participate in ongoing training and research into the diagnosis and treatment of lower extremity nerve injury repair. My involvement with this group has been a vital learning experience and has provided me with a unique set of skills and knowledge that I am able to use in daily practice to treat a variety of complaints.

During my time as a surgical fellow with the Chicago Lower Extremity Deformity Correction Center I had the opportunity to focus entirely on the diagnosis and treatment of pediatric foot and ankle issues which can include everything from ingrown toenails to flat foot reconstruction. Treating kids has continued to be a very important and special part of my practice and I take that responsibility very seriously. I will always take all the time necessary to properly explain to both parent and child exactly what the issue is and what options are available to treat it.

Commitment to patients

My approach to patient care involves a certain amount of teamwork with doctor and patient working together toward a common goal. Life brings with it an abundance of complex problems and very few simple solutions. As your doctor my most important job is to listen to you and understand how your foot problem is affecting your life. From there we can start building a treatment plan that is tailored to fit your own unique situation and needs. I look forward to having you as a patient.
