

Brew POS Seasonal Shut Down Form

Your BrewPOS system is designed to run in its current configuration consistently. Removing elements from the system can create problems with your system. If your company is going to be inactive for several months or is only going to use a portion of your system for a season of the year it does make sense to set up a seasonal shutdown. You may elect to shut down some or all of your BrewPOS Stations seasonally. Shutdowns will occur at the end of the current monthly billing cycle, the last day of the month. When you return a system from seasonal shutdown. You will be billed for that entire months cycle. BrewPOS does not have the ability to bill for partial months.

Select your service choice.

___ Place my entire service on seasonal Shut down.

___ Place these stations on Seasonal Shut Down. Starting on the first day of _____ 20____
List the stations by terminal name.

___ Return these stations from Seasonal Shut Down. Starting on the first day of _____ 20____
List the stations by terminal name.

To bring units back off seasonal shutdown you may need to schedule an install with support. If installations require a re configuration of hardware you may incur a \$99 reinstallation fee.
