For Ford 6.0L Power Stroke Diesel

Above: Our upgraded EGR Cooler left, Ford Stock Part at Right

Above: Bullet Proof Round and Square Design EGR Coolers for 6.0 Diesels

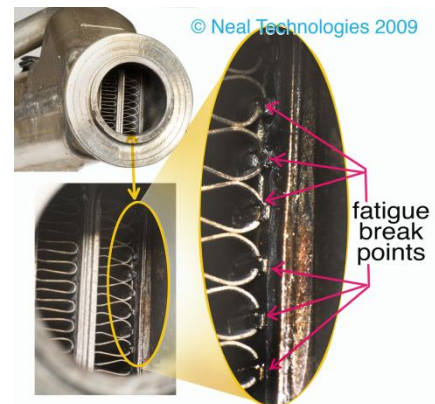

Thick Walled Stainless Steel Core

The fix for a well-known issue:

Most Power Stroke Owners love their trucks, but know Ford had a problem with the **6.0L diesel engines**. The NT-EGRC addresses the problem with the stock Ford ERG Cooler on all trucks since 9/23/2003. We have seen a high failure rate in Ford's stock part. Servicing these repairs was offer a no-win situation, as "parts failure" translates to "shop failure" in the customer's eyes.

Upgraded and Improved Features Include:

- **Fixed Right** – At an average repair cost of \$1000 for each failure, repeating the same repair makes no sense; though upgrading does.
- **Street Legal** – No "Just living with it" sustained "Check Engine Light" by bypassing the EGR system. No possible vehicle inspection failures due to bypass and possibly voiding the factory or extended warranty.
- **Excellent Performance** – This upgrade allows the engine and the computer to continue to work the way that Ford intended it to work.
- **Compatible with High Performance Upgrades** – This upgrade allows for EGR compatibility with high-performance after-market additions. This includes performance chips, increased turbo boost, larger injectors, etc.
- **Prevents Engine Damage** – Hydro-locking, overheating and internal engine damage are all possibilities **when** the Ford Stock Cooler fails.
- **Increased Reliability** – The welded stainless steel design will give you peace-of-mind when working, traveling or towing.
- **Warranty** - This product comes with Lifetime Warranty. (*see website for details)
- **Multiple Solutions** – The 6.0L engine has two different possibilities for EGR coolers, we offer both.
