GEO-JOIST

GEO-JOIST is an engineered stay-in-place formwork, providing energy efficient, fast track and cost-effective building systems.

 **GEO-JOIST** significantly reduces slab thickness and weight while increasing the strength due to the cast-in-place joists.

 This system creates a frost-protected structure eliminating the need for frost walls and saving considerable costs from excavation and hauling of spoils.

 Insulating EPS formwork provides excellent energy performance, and acts as a vapor barrier.

 Perfect application when in-floor heating is requested.

 Varying thickness available, eliminating the need for compacting structural fill.
