

PILE INSTALLATION IN LIMITED ACCESS / LOW HEADROOM AREAS

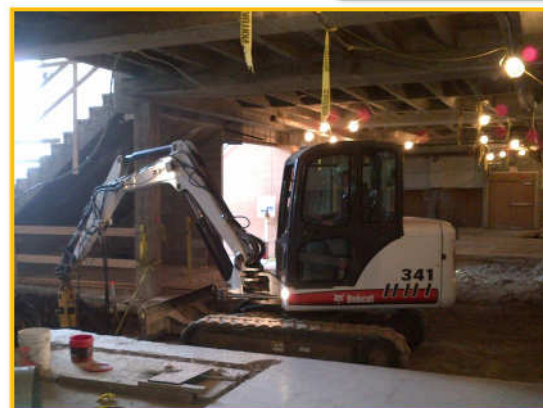

- *Commercial*
- *Municipal*
- *Industrial*

Utilizing special equipment, ingenious ideas and methods, CMI has consistently found ways to install helical piles where other systems were not feasible. Custom length pile extensions are ordered to meet the height constraint requirements and then they are bolted together in sequence until the desired depth and/or capacity are achieved. There are no spoils to remove, minimal noise and no vibration.
