COPPER -vs- ZINC

* Test results have shown Copper Cat to clean 30ft down roof face.

NOTES ON CHEMICALS

- Chemicals are a temporary solution requiring reoccurring applications.
- Waste of money in the long run.

COPPER CAT

- Eliminates exposure to harmful chemicals.
- Utilizes natural organic chemistry to fight natural organic issues.
- Renews roof system, extends roof life cycle.

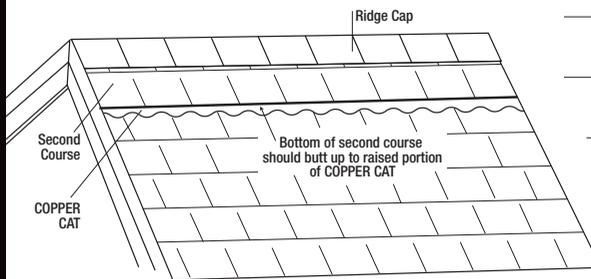

- The double-sided copper strip is 20x stronger than zinc strips
- The copper oxidizes and eventually blends with 90% of shingle colors for a neat and clean look
- Uses the natural process of water interacting with copper to release ions that prevent growth of algae, mold, moss, etc. on shingles
- Works on new or existing roofs made of asphalt, cedar, slate, etc.
- Helps improve the overall look of a roof by removing black streaks, patchy spots, and other unsightly discolorations

They will continue to work for hundreds of years and can be reused on each new roof.

INSTALLATION INSTRUCTIONS

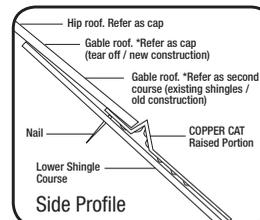

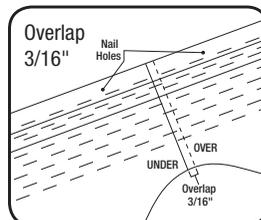

For further instructions and videos, visit coppercat.com

From left, use a roofing flat bar to lift bottom of 2nd course. Slide a COPPER CAT strip under 3/4" to where bottom of shingle butts up to COPPER CAT'S raised portion, nail down, repeat to end.

* Install Copper Cat along all ridge lines for complete coverage.

* Cover all nail heads with a dab of roofing compound or caulking that is suitable for high temperatures.
