

Save Money with an Alarm.com Powered Smart Thermostat

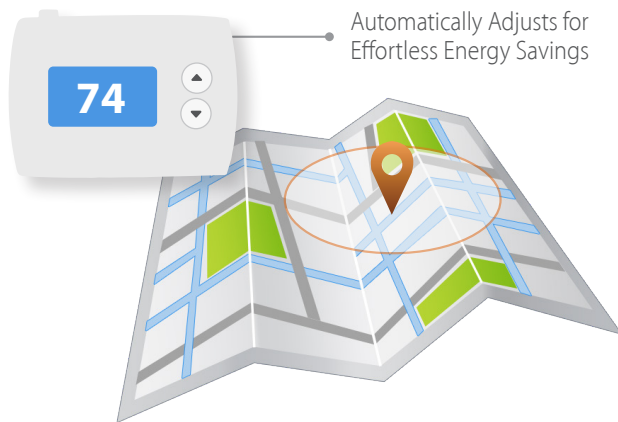

- Reduce energy use without compromising your lifestyle
- Control your lights and thermostat anywhere with your smartphone
- Stay aware of thermostat changes with email and text notifications

NEW!

Location-Based Thermostat Automation

Use your phone's location to trigger automatic adjustments to your thermostat. For example, set your thermostat to automatically adjust to an energy saving temperature when you drive away from home, and adjust to a more comfortable setting when you leave work to return home.

NEW!

Energy Assistant

Energy Assistant combines knowledge about your home's occupancy, energy use, and electric utility incentives to further optimize energy savings and help you save money while staying comfortable. When local electric utility incentives are available, Energy Assistant informs you of opportunities that you can take advantage of.

PLUS...

Extreme Temps

With Extreme Temps, your thermostat can automatically adjust itself when extremely hot or cold weather is forecasted in order to reduce energy costs and lessen the chance of widespread power outages.

Smart Schedules™

Adjust and optimize your thermostat settings based on actual activity patterns throughout your home as captured by your door, window and motion sensors.

Customized Triggers

With Alarm.com, you can set up powerful, customized rules to automatically control your thermostats based on your personalized settings.

Remote Control

Access your thermostat and modify the temperature either online or through our free mobile app no matter where you are.
