

A HOMEOWNER'S GUIDE TO ATTIC VENTILATION

Using traditional “pot” or turbine vents results in uneven ventilation and creates hotspots on your roof.

WITHOUT QUARRIX VENTILATION

WITH QUARRIX VENTILATION

QUARRIX: THE MOST EFFECTIVE VENTILATION. THE MOST ATTRACTIVE VENTILATION.

With Quarrix Ridge Vent and Multi-Use Vent, it's what you don't see that makes your roof look so good. The need for unsightly protruding vents and baffles is eliminated.

PROTECTING YOUR HOME STARTS AT THE TOP

Quarrix intake and exhaust ventilation products keep energy costs from going through the roof... literally. Proper attic ventilation reduces cooling costs and damage caused by trapped heat and moisture. Quarrix Ridge Vent ventilates continuously by releasing hot, moist air from the attic space.

Quarrix Ridge Vent is placed over the peak of your roof to allow the hottest, most damaging air accumulating in your attic space to escape right where it gathers the most. The Ridge Vent's patented Storm-Stop™ membrane keeps out wind-driven rain and snow.

DON'T BE BAFFLED...

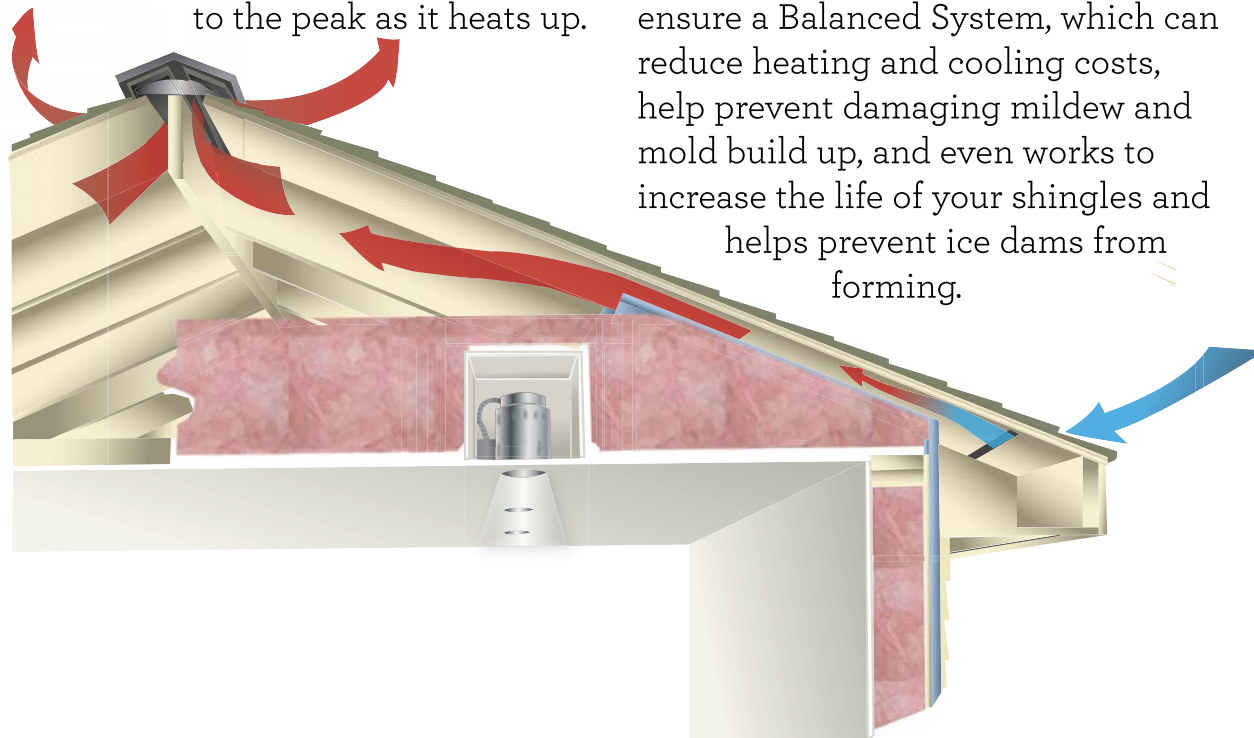

Quarrix Ridge Vent is designed so that an external baffle is not needed. Prone to breaking and clogging, vents that have baffles need them to keep out snow, rain and dust. With our Storm-Stop™ membrane, these unsightly baffles are unnecessary.

EXTEND THE LIFE OF YOUR ROOF

Your home needs to breathe in to breathe out, which means that simply exhausting air isn't enough. Along with ventilation at the ridge, you need to have a greater or equal amount of air intake at the lower edge (the eave) of your roof, to create a *Balanced System*. Cool air entering low into the attic naturally rises to the peak as it heats up.

Quarrix Multi-Use Vent was developed to provide the right amount of air intake at the eave to ensure a Balanced System, which can reduce heating and cooling costs, help prevent damaging mildew and mold build up, and even works to increase the life of your shingles and helps prevent ice dams from forming.

APPEARANCE

Quarrix Ridge Vents and Multi-Use Vent have a low 5/8" profile. Both vents will have shingles installed over them, which makes them virtually invisible.

That means that you get better ventilation with our balanced system, better protection with the StormStop™ Membrane, and a more attractive roof.

breathe easy WITH QUARRIX ROOF VENTILATION

Be confident. Quarrix Ridge Vent is the most tested and certified on the market. The design utilizes natural ventilation created by the Balanced System. Ridge Vents ventilate along the entire length of the roof - other products only cut holes that create hot spots. Hot air naturally rises to the peak of

the attic, so why not vent it there?

Quarrix Ridge Vent can be installed on the hip of the roof, and Multi-Use Vent has three different applications. No matter your specific type of roof, the Quarrix Ridge Vent and Multi-Use Vent will ensure a high performing Balanced System.
