Get out of the data center business with Faction Hosted Private Cloud
Cost effective, fully managed Private Cloud for VMware workloads

Don’t sacrifice security and control when you migrate or extend your data center to the cloud. At Faction, we provide you with a managed, single tenant infrastructure dedicated solely to your business. Our private cloud, called Faction Bloc, delivers a fully managed, Software-Defined Data Center (SDDC) built on trusted VMware technology, making sure you get the most out of existing investments in people, VMware technology, and tools. As your business evolves, we provide the flexibility to extend to VMware Cloud on AWS or other hyperscale clouds with Faction’s portfolio of multi-cloud solutions.

Use Cases

**PRODUCTION ENVIRONMENTS**
Our hosted private cloud offers a trusted VMware platform for production applications, combining predictable performance, built in high availability, and the elevated level of control you are accustomed to.

**DATA CENTER MIGRATIONS**
Not all applications are ready for public cloud. Migrate to a hosted private cloud on a familiar VMware technology stack to reduce migration risks and application compatibility issues.

**DISASTER RECOVERY**
Replicate to Faction using existing tools like VMware SRM, leveraging tried and tested processes that help reduce human error through automation.

**VIRTUAL DESKTOPS**
Proven platform to run leading solutions like VMware Horizon View and Citrix Virtual Apps and Desktops.

**OFFSITE BACKUP**
Leverage our hosted private cloud as an expandable, low-cost storage target for your critical data and applications.
