## Our Odyssey

---

Fiberpol Technologies is a family run company; crafting durable and luxurious Surfacing Solutions, from Solid Surface, Granite & Quartz for families, businesses and industrial applications alongside other professionals in the design and construction field since 1991.

Our fabrication is done entirely in house at our convenient facility in San Juan. We have included trained personnel on our staff & we now approach your projects with more than 25 years of accumulated fabrication experience!

We partner with Architects, Interior Designers, Contractors and Homeowners in order to meet your needs more exactly. Together, Fiberpol Technologies and Our Partners, provide expert advice and tailored surfacing solutions for Our Customers, ensuring complete satisfaction and an enjoyable customer experience.

We look forward to being a part of your project!

## Our Team

---

## Our Vision

---

To continue to excel in providing innovative and trending solutions and expand our product lines to be a more comprehensive solution provider to our clients. Also, to expand into developing markets in the Caribbean and South America.

## Our Mission

---

To provide quality solutions to our customers by using industry best practices, while advancing the quality of life of our staff and community. To use our expertise and knowledge to provide solutions - driven, customer-centric service in the markets we serve.

## Our Values

# Quartz

Fiberpol Technologies Ltd  
*Correct Is Right*

## KITCHEN

## Bar Counter

Quartz is an engineered stone, composed of over 90% pure quartz crystals, coupled with high-performance, stain-resistant polymers, which make it a durable surface, ideal for any countertop application. Quartz is both heat and scratch resistant, but we do not encourage you to place very hot items on your counter tops or to use your counter top as a cutting surface.

## KITCHEN

## vanity

Solid Surface is a non-porous, seamless material which is chemical and stain resistant. Solid Surface has a 100% Acrylic base and is largely heat resistant, although we do not recommend placing very hot items directly on the surface. Counters made of Solid Surface will scratch/gouge if used as a cutting/chopping surface, so we recommend the use of a cutting board.

However, Solid Surface can be repaired or refinished to regain its original “new” look.

## KITCHEN

## OUTDOOR Bar

Granite is an igneous rock, formed from solidified magma (molten rock) from the earth's core. Granite is heat **resistant**, but extreme heat can cause cracking or pitting (pieces of stone coming out) due to thermal shock. Therefore we recommend not placing very hot items directly on to granite surfaces. Granite is also scratch **resistant**, but not entirely scratch-proof as heavy objects dragged across its surface can cause damage.

# Past Customer Experiences

"In Trinidad, it is rare that one comes across a company with any form of professionalism. When we do, it is worth noting. Not everyday but every time, I go into the bathroom, I cannot believe that I have a beautiful counter top with a modern functional face basin and faucet. You have no idea how much joy it brings me. I have been without functional facebasin for three years because no one could solve the problem. Fiberpol did. I cannot thank Judy enough for finding you and your good taste in the choice of accessories."

*A Happy Customer*

"Fiberpol Technologies Ltd was recommended to me by my architect to install kitchen and bathroom counters at my home in central Trinidad. From the very first interaction with them, I felt assured that I made the right selection. They were very good in guiding the client to make the best choice from the wide range of finishes they carry. They were prompt in providing their quotations and equally prompt in the delivery and installations. Their installations were completed precisely as scheduled with no gimmicks, no excuses and the workmanship was of an extremely high quality. I would strongly recommend Fiberpol Technologies Ltd for your counters."
