

FUSION 7

Rugged Mobile Computing Solutions

Rugged Android Tablet

The Glacier Computer **Fusion 7** is a Rugged Android Tablet. It combines the best aspects of a mobile operating system (e.g. largest user base; advanced power/memory management; more than 1 million apps) with the fiercely rugged attributes typical of all Glacier Computer devices.

The **Fusion 7** is compact, light, and feature-rich. It is ideal for use in very harsh environments such as warehousing/transportation, shop floor, public safety, military, process control, and field service.

When extreme temperature swings, intense shock and vibration, and high levels of moisture and dust are "the norm", the **Fusion 7** is your best option.

The **Fusion 7** is a solid platform for organizations who seek ways to make their mobile employees more efficient but need an extended life from their capital assets.
