

Introducing LC BALANCER™

ENHANCED MICROCIRCULATION

The LC Balancer™ functions to open the smallest blood vessels, called microcapillaries, to enhance whole body microcirculation for effective nutrient delivery to organs and tissues. The enhanced microcirculation also improves nutrient absorption from the digestive tract to assist in healing and combat the aging process. LC Balancer™ helps resolve conditions due to poor microcirculation and enhances results and outcomes when combined with other Wei formulas.

✓ FIBROMYALGIA

LC Balancer™ can effectively address fibromyalgia and associated body pains, fatigue, and “tender points” by restoring the systemic microcirculation in 4-6 weeks.

✓ KIDNEY SUPPORT

LC Balancer™ improves the structure of the renal tubules and glomerulus as well as helps repair damage to the microcapillaries caused by aging or kidney diseases to support the kidney’s waste filtration.

✓ CHRONIC MUSCULOSKELETAL & OTHER CONDITIONS

In addition to being a stand-alone product utilized for many microcirculation conditions, LC Balancer™ is also used in many other protocols including musculoskeletal, kidney, liver, and respiratory conditions. It assists formulas such as the WHITEE Patch™, Xcel™, Brown™ and Soup A™ by enhancing the absorption and delivery of specific herbal ingredients to targeted organs.

CONDITIONS

LC Balancer™ addresses

- Fibromyalgia
- Diverticulitis
- Chemo/Radiation Side Effects
- Kidney Damage
- Osteoporosis
- Gastritis
- Aging
- + Additional Protocol Support
