

# Dynamic Risk Hedged - U.S. Growth Index

Q4 2017

## Quarterly Update

The Peak Capital US Growth Index Total Return (also referred to as the Dynamic Risk Hedged U.S. Growth Index or DRH US Growth Index) is designed to provide long-term capital appreciation through an investment primarily in U.S. equities and Treasuries. The Index is quantitatively designed using a risk-budgeting methodology. In general, roughly 95% of total risk is allocated equally across five equity factors - size, value, quality, momentum and volatility. The remaining 5% of total risk is allocated to long-duration Treasuries. The dollar weights are rebalanced monthly to match the desired risk budget. If correlations rise or overall volatility exceeds certain thresholds, the Index can incorporate a short position to large-cap U.S. equities and cash to help ensure diversification and limit overall volatility. The result is an Index that can potentially provide attractive risk-adjusted returns over multiple market cycles. There is no guarantee the Index will achieve its objective. The index is independently calculated by S&P Dow Jones Indices.

### Index Description

Inception Date:	January 1, 2000
Investment Objective:	Capital Appreciation
Time Horizon:	Long-Term/Multi-Cycle
Risk Profile:	8-10% Volatility
Methodology:	Risk Budgeting
Implementation:	Quant/Rules-Based
Calculation Agent:	S&P Dow Jones Indices

## Index Descriptions

The S&P 500® Low Volatility Index measures performance of the 100 least volatile stocks in the S&P 500. The index benchmarks low volatility or low variance strategies for the U.S. stock market. Constituents are weighted relative to the inverse of their corresponding volatility, with the least volatile stocks receiving the highest weights. The S&P 500® Momentum is designed to measure the performance of securities in the S&P 500 universe that exhibit persistence in their relative performance. The S&P 500 Enhanced Value is designed to measure the performance of the top 100 stocks in the S&P 500® with attractive valuations based on "value scores" calculated using three fundamental measures: book value-to-price, earnings-to-price, and sales-to-price. The S&P SmallCap 600® measures the small-cap segment of the U.S. equity market. The index is designed to track companies that meet specific inclusion criteria to ensure that they are liquid and financially viable. The S&P 500® Quality Index is designed to track high quality stocks in the S&P 500 by quality score, which is calculated based on return on equity, accruals ratio and financial leverage ratio. The S&P U.S. Treasury Bond 20+ Year Index is designed to measure the performance of U.S. Treasury bonds maturing in 20 or more years. The S&P 500 Inverse Daily Index provides inverse (positive or negative) returns of the S&P 500® by taking a short position in the index. The S&P U.S. Treasury Bill 0-3 Month Index is designed to measure the performance of U.S. Treasury bills maturing in 0 to 3 months.
