What did PLC do today?

Today I did the following application(s):

___ Second Fertilization (F2): Our second fertilization of the year encourages strong growth to help your lawn thrive through the summer and into the fall and to maintain that green color we all love. Spot treatment for weed breakthroughs is included.

What to do Next

- Wait 2-24 hours or more then (if it has not rained) water **15-30 min** in each area. Watering moves the fertilizer into the soil.
- Mow as needed. If possible, **BE SURE** you water before you mow! If watering is not possible, please **MULCH** clippings.
- REMEMBER: lawns need about one inch of rainfall, or equivalent watering, per week. Please see our website for more info.
- Some discoloration may be seen from weed touchups. This is temporary and typically fades by the time of the second mowing.

Application Payment Info

Payment is due upon the completion of the application.

There are multiple ways to pay. Our newest feature is a monthly bill cycle! You may also pay online with your credit card or an electronic check from our website

www.personallawnCare.com

If you have questions regarding your bill or to set up monthly payments please call Sandy at (901) 829-4200 or email at

sandy@personallawnCare.com

Thank you for the opportunity to service your lawn. If you have any questions please do not hesitate to ask. Contact our office by phone at 829-4200 or email at ContactUs@PersonallawnCare.com.

Insect and Disease Control Applications

Recently, due to our unusually wet spring and humid summer seasons, many Zoysia lawns have experienced above average fungal disease or insect issues. Several different fungal problems are commonly seen in the Mid-South, and many (but not all) affect Zoysia lawns. If you have Zoysia, we highly recommend two preventative fungicide applications each year (one spring and one fall). This is equivalent to using bathroom cleaner on your shower **before** things start “growing”. Treating fungal diseases or insect infestations before damage has begun will significantly reduce expense and the headache of treating a full outbreak.

If your lawn received the fungicide application this past spring, it is already scheduled for the fall application.

Fescue Lawns

Late August and early September is the time to begin making **plans** for re-seeding Fescue areas.

Best results come from fall seeding—early September through early October. The early planting allows time for the seedlings to mature before winter.

If you plan to reseed, please let us know so we can adjust our pre-emerge schedule.

NEW!

OTHER SERVICES AVAILABLE

- Crape Myrtle Bark Scale Apps
- Mosquito Reduction Apps
- Flea and Tick Treatment
- Fescue Overseeding

Tips About Mowing & Watering

- Bermuda and Zoysia lawns should be mowed at the highest possible height until the first frost of the season.
- Fescue lawns should be mowed at 3 inches **at all times.**
- For best results, do not mow or rake lawn before watering or rain fall. If you must mow, please use a mulching lawn mower. This will return nutrients and organic matter to the soil.
- Lawns typically need about 1 inch of rainfall (or equivalent) per week. Measuring the watering cycle with a can and ruler can help determine irrigation cycle timing, etc. Please call or email for more information.
