

BENEFITS TO LANDSCAPE LIGHTING

Expanding nighttime living space:

When light is brought to a dark back or front yard, it visually pushes the boundaries of a house. The more elements that are lit, the more people will push the edges of where a person will tend to gravitate to beyond the interior of a house. Pushing this boundary creates a visually striking look for the outside of the house.

Safety:

Outdoor lighting can add safety in a variety of ways. Light walkways to ensure that people navigate these areas safely. Use zone lighting to illuminate areas of your yard and landscape for nighttime use.

Security:

A well-lit landscape and yard presents a feeling of security and maintenance. When you keep your outdoor areas illuminated, you present a feeling of care and involvement.

Curb appeal:

A well-lit home presents a cared-for impression to the entire neighborhood. Your house will appear warm and inviting as it sits quietly on your property.

Comfort:

Extend your living areas by lighting your outdoor landscape. If you have a patio or deck with seating, add comfortable and attractive lighting to enable you to use these areas after dark. The ambiance of outdoor seating can be pleasant and inviting, especially when you feature attractive outdoor lighting that adds to your outdoor decor. Use a combination of up-lights as well as lights installed on outdoor structures to illuminate your seating areas effectively.

Increased property value:

Did you know that Calgary homes generally sell for more if they have landscape lighting. Calgary realtors recognize the many benefits of outdoor lighting when showing different homes, giving you the right to set a higher asking price if your home boasts this feature.
