THE WHOLE HOUSE HEALTH AND EFFICIENCY EXPERTS

## Multi Stage Filtration System

- ▶ **Pre-Filter**  
Removes rust, dirt, dust, & other debris.
- ▶ **Main Filter**  
Contains 3 stages: Copper-Zinc, mineral stone, and activated charcoal.
- ▶ **Post-Filter**  
Removes any remaining sediment and organic compounds down to 0.35 microns.
- ▶ **Salt-Free Water Conditioner**  
Uses SCM technology to remove hard minerals preventing scale buildup and helps protect your pipes and water-using appliances.

## Benefits

- ▶ **Safer Drinking Water.**  
Well water, municipal water supplies, and even bottled water contain contaminants such as lead, pesticides, chlorine, ammonia, fluoride and up to 2100 other known toxins, many of which are carcinogens.
- ▶ **Protect the Environment.**  
50 billion plastic bottles purchased in the USA in 2018. Only 38% of plastic bottles end up recycled while the rest end up in landfills or our oceans.
- ▶ **Minimize aggravation of skin conditions.**  
Substances such as heavy metals, fluoride and chlorine in the water can aggravate skin conditions. This includes psoriasis and eczema, especially in children.
- ▶ **Cost Savings.**  
The average family of 4 spends approximately \$700 per year on bottled water. (\$5 per case)
- ▶ **Reduce Repair Bills.**  
Heavy metals, minerals and chemicals in unfiltered water can cause damage to your plumbing system. It is not only the pipes that could be affected but also other home appliances that use water. This includes your water dispenser, refrigerator ice maker, garbage disposal, dishwasher and washing machine.
- ▶ **Improve the taste of drinking water.**  
Water filters remove elements that cause drinking water to have an unpleasant taste and smell, such as lead, chlorine and bacteria. Home water filtration system will improve the overall purity, taste and smell of your drinking water. It also lowers the pH level of the water that you drink.
- ▶ **Reduce risk of gastrointestinal diseases.**  
Several parasites can be found in the water and many microscopic organisms live in sources of water that have not been treated properly. Parasites that can cause intestinal and digestive problems are removed by filtration.
- ▶ **Remove soap scum and deposits on clothes.**  
Over time, the chemicals in unclean tap water will leave deposits on clothes, causing them to smell differently. It also can lead to rashes and allergies. Likewise, unclean water causes soap scum buildup on your dishes, your clothes and your bathroom.

HOW IT WORKS  
SUPERIOR  
FILTRATION

EASY TO INSTALL,  
REPLACE & MAINTAIN.  
DOES NOT REQUIRE  
BACKFLUSHING OR  
DRAINAGE LINES.

SEDIMENT  
PRE-FILTER  
catches rust,  
sediment and silt.

SALT-FREE  
SOFTENER\*  
prevents minerals from  
binding and forming  
scale build-up.

COPPER-ZINC &  
MINERAL STONE  
reduces chlorine, water  
soluble heavy metals, and  
scale and inhibits  
bacteria and algae  
growth.

ACTIVATED  
CARBON FILTER  
reduces herbicides,  
pesticides and other  
chemical compounds  
that may be present.

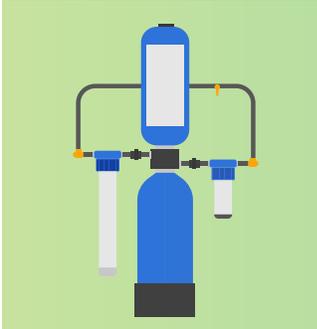

SUB-MICRON  
POST-FILTER\*  
reduces any  
remaining sediment  
and organic particles  
down to 0.35 microns.

UV  
FILTER\*  
further protects  
against bacteria and  
viruses that could be  
present in your water.

Our NSF Certified whole-house water filter system is comprised of carefully sequenced stages, each with its own unique formula of high-potency contaminants grabbing media and filtration.

## THE WHOLE HOUSE HEALTH AND EFFICIENCY EXPERTS

**1M**  
GALLON  
Warranty

The average household uses approximately 100,000 gallons per year. That's 10 years before the main filter needs to be replaced.

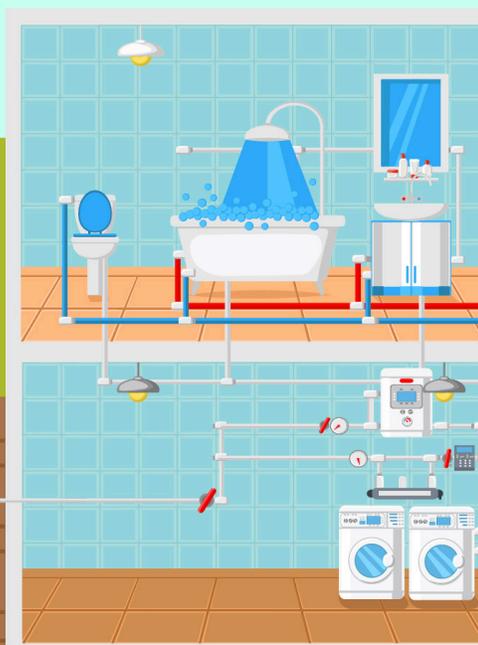

*The pre and post filters require regular replacement.*

### Uses Coconut Shell-Activated Carbon.

Coconut Shell Activated Carbon is the best option for Activated Carbon filters. It contains 50 percent more micro-pores than bituminous coal. This makes coconut better able to adsorb volatile organic chemicals, which are otherwise difficult to remove from water. Coconut shell carbon's purity also makes it a better choice for Activated Carbon Filters. Whereas other carbons can contribute taste due to inorganic ash, coconut contains a relatively low amount. This creates a more consistent, uniform and non-leaching carbon block that outperforms other options in terms of quality. It's the greener choice as no harmful mining or harvesting of trees are required to produce the carbon needed to make the filters. The most notable benefit is that coconut shell activated carbon creates the cleanest water of any activated carbon.

### How Contaminants Get Into OUR WATER SUPPLY

**BATHROOM:** Substances such as heavy metals, fluoride and chlorine in the water can aggravate skin conditions.

**LAUNDRY ROOM:** Heavy metals, minerals and chemicals in unfiltered water can cause damage to your plumbing system. It is not only the pipes that could be affected but also appliances that use water.

**KITCHEN:** Several parasites can be found in the water. Many microscopic organisms live in sources of water that have not been treated properly. Parasites that can cause intestinal and digestive problems are removed by filtration.
