DID YOU KNOW?

RCHC has many exceptional services that can help Rawlins County and the surrounding area better take care of their health. The Diagnostic Imaging department at RCHC does DEXA scans. What is a DEXA scan? DEXA or bone densitometry measures the bone mineral density and bone loss (osteoporosis) in men and women. A Bone Mineral Density (BMD) measurement is a powerful predictor of skeletal strength and fracture risk. This service is available with our in house DEXA scanner. Visit with your provider today to see if you should schedule a DEXA scan.

RCHC OFFERS CALCIUM SCORING

RCHC now offers a non-invasive way to help your provider calculate your risk of developing coronary artery diseases such as a heart attack or stroke. A cardiac CT scan for coronary calcium can detect the presence, location, and extent of calcified plaque in the coronary arteries. Insurance does not cover this CT scan, which is available for \$100. A provider order is required. If you have any questions regarding this test, please call the Diagnostic Imaging department at 626-3211 ext. 232.
