HOT MELT ADHESIVE FEEDER HF3

Installs on any hot melt supply unit!

The Dynatec Advantage

- Completely removes an operator from the hot melt supply unit area, thus preventing burns, adhesive spills and equipment contamination caused by overfilling of the adhesive hopper.

- Nozzle plugging and adhesive supply system contamination is virtually eliminated as the fully enclosed adhesive supply system keeps contaminants out.

- Less thermal shock to the hot melt system that results in balanced adhesive flow and ultimate adhesive savings.
