Chapter		Page
	List of Authors	
	Preface	
1	Space Systems Engineering	1
1.1	The Art and Science of Systems Engineering	3
1.2	Apply Systems Engineering Across the Lifecycle	15
1.3	Create and Maintain the Technical Baseline	20
1.4	Establish a Systems Engineering Framework	22
1.5	Identify Capabilities of the Systems Engineer	28
1.6	Introduction to the End-to-End Case Study—FireSAT	31
2	Stakeholder Expectations and Requirements Definition	37
2.1	Define Initial Customer Expectations	39
2.2	Identify the Stakeholders	45
2.3	Solicit and Synthesize Stakeholder Expectations and Requirements	47
2.4	Articulate Stakeholder Expectations and Requirements	57
2.5	Rank Order Mission Requirements and Identify Critical Acceptance Criteria	57
2.6	Synthesize Essential Mission Requirements	61
2.7	Validate and Baseline Requirements. Translate Into Technical Requirements.	62
3	Concept of Operations and System Operational Architecture	65
3.1	Validate the Mission Scope and the System Boundary	67
3.2	Describe the System’s Operational Environment, Primary Constraints, and Drivers	71
3.3	Develop Operational Scenarios and Timelines	74
3.4	Synthesize, Analyze, and Assess Key Implementing Concepts for the System and Its Elements	80
3.5	Document the Concept of Operations and the System’s Operational Architecture; Apply Architectural Frameworks	83
3.6	Validate and Baseline the System’s Operational Architecture	89
4	Engineering and Managing System Requirements	95
4.1	Before Requirements	98
4.2	Engineer the System Requirements	106

Chapter		Page
	4.3 Document the Requirements	121
	4.4 Baseline the Requirements	129
	4.5 Manage the Requirements	133
5	System Functional and Physical Partitioning	141
	5.1 Specify the System Context	147
	5.2 Define the Functional Partitions	151
	5.3 Create the Physical Partitions and Allocate Functions to the Physical Components	173
	5.4 Assess the Architecture	186
	5.5 Allocate Requirements to the Components and Generate Detailed Specifications	191
	5.6 Trace Requirements	193
6	Decision Making	201
	6.1 Identify What We Need to Decide	203
	6.2 Frame the Decision	205
	6.3 Select a Method to Evaluate Alternatives	209
	6.4 Generate Alternatives	217
	6.5 Choose the Best Solution	217
	6.6 Test and Evaluate	223
	6.7 Consider a Case Study	223
7	Lifecycle Cost Analysis	233
	7.1 Develop a Work Breakdown Structure (WBS)	236
	7.2 Gather Space System Characteristics	238
	7.3 Compute the System Development Cost	245
	7.4 Estimate Operations and Support Costs	256
	7.5 Estimate Cost of Developing the Launch Site's Infrastructure	284
	7.6 Estimate Total Lifecycle Cost and Assess Cost Risk	288
	7.7 Conduct Cost-Risk Analysis	290
8	Technical Risk Management	293
	8.1 Prepare a Technical Risk Management Strategy	296
	8.2 Identify and Document Technical Risks	299
	8.3 Conduct Technical Risk Assessments	301

Table of Contents

vii

Chapter		Page
8.4	Determine an Initial Risk Handling Approach	319
8.5	Plan Risk Mitigations and Triggers	319
8.6	Monitor Risk Status	321
8.7	Implement Risk Mitigations	324
8.8	Capture Technical Risk Management Products	324
9	Product Implementation	327
9.1	Prepare for Implementation	329
9.2	Participate in Buying the Product	334
9.3	Participate in Acquiring the Reuse End Product	340
9.4	Evaluate the Readiness of Items that Enable Product Implementation	340
9.5	Make the Product	341
9.6	Prepare Appropriate Product Support Documentation	348
9.7	Capture Product Implementation Work Products	348
9.8	Ensure Effective Communication	349
10	System Integration	351
10.1	Define the Role of System Integration within Systems Engineering	351
10.2	Select a System Integration Approach and Strategy	356
10.3	Set Up a Test and Integration Plan	365
10.4	Schedule in the Presence of Unknowns	373
10.5	Form the Integration Team	375
10.6	Manage a Changing Configuration	377
10.7	Adapt Integration to the Project Specifics	380
10.8	Solve Typical Problems	381
11	Verification and Validation	385
11.1	Validate Requirements	391
11.2	Validate Models	396
11.3	Verify Products	404
11.4	Validate Products	432
11.5	Certify Products for Flight	444
11.6	Address Special Challenges of Commercial Off-the-Shelf and Non-Developmental Items Product Verification	452

Chapter	Page	
11.7	Verify and Validate Software	454
11.8	Document and Iterate	475
12	Product Transition	479
12.1	Plan the Transition	481
12.2	Verify that the Product is Ready for Transition	487
12.3	Prepare the Product for Transportation to the Launch Site	488
12.4	Transport to the Launch Site	489
12.5	Unpack and Store the Product	492
12.6	Integrate With the Launch Vehicle	496
12.7	Roll Vehicle Out to the Launch Pad	497
12.8	Integrate With the Launch Pad	497
12.9	Conduct Launch and Early Operations	501
12.10	Transfer to the End User	503
12.11	Document the Transition	506
13	Plan and Manage the Technical Effort	507
13.1	Prepare for Technical Planning	509
13.2	Define the Technical Work	513
13.3	Schedule, Organize, and Cost the Technical Work	529
13.4	Prepare the Systems Engineering Management Plan and Other Technical Plans	547
13.5	Get Stakeholder Commitments to Technical Plans	551
13.6	Execute the Technical Plan	553
13.7	Document and Iterate	555
14	Technical Direction and Management: The Systems Engineering Management Plan (SEMP) in Action	565
14.1	Introduction to the Systems Engineering Management Plan	565
14.2	Determine the Contents of the SEMP	567
14.3	Develop the Systems Engineering Management Plan (SEMP)	580
14.4	Characteristics of Good and Bad Plans	589
14.5	Necessary Elements for Executing a SEMP	593
14.6	A Look at DoD's SEP	598

Chapter		Page
15	Manage Interfaces	603
15.1	Prepare or Update Interface Management Procedures	607
15.2	Decompose the System Physically and Functionally	609
15.3	List Interfaces and Prepare Initial Interface Requirements Documents (IRDs)	614
15.4	Develop NxN and IxI Diagrams	615
15.5	Develop Sub-level Work Breakdown Structure (WBS) of the Lifecycle Interface Design and Verification Tasks	621
15.6	Develop an Interface Control Document (ICD) for Each Interface	621
15.7	Manage Interfaces during Product Integration	628
15.8	Design Interfaces, Iterate, and Trade	631
15.9	Build Interfaces	632
15.10	Verify Interfaces Including Integration with the System	633
15.11	Document, Iterate, and Control the Configuration	633
15.12	Develop Operating Procedures and Training	634
16	Manage Configuration	639
16.1	The Configuration Management Process	639
16.2	Develop the Configuration Management Plan	642
16.3	Establish Configuration Identification	648
16.4	Manage Change	652
16.5	Communicate Progress with Configuration Status Accounting	661
16.6	Conduct Verifications and Audits	664
17	Manage Technical Data	669
17.1	Prepare a Strategy for Managing Technical Data	670
17.2	Collect and Store Required Technical-data Artifacts During the Engineering Lifecycle	687
17.3	Maintain Stored Technical Data	691
17.4	Provide Technical Data to Authorized Parties	701
17.5	Collaborate by Effectively Using System and Process Artifacts	708
18	Technical Assessment and Reviews	715
18.1	Define the Subject and Scope of the Review	716
18.2	Establish the Entrance Criteria	717

Chapter		Page
18.3	Identify and Invite the Review Team	718
18.4	Conduct the Review	719
18.5	Ensure that the System Meets Success Criteria	721
18.6	Specify and Document the Decisions	721
18.7	Clarify and Document the Action Items	722
18.8	Baseline the Design	722
18.9	Improve the Process for Technical Reviews	730
19	FireSAT End-to-End Case Study: A Parable of Space Systems Engineering in Seven Parts	733
19.1	Certify the As-deployed Baseline	735
19.2	Define the Mission Baseline	741
19.3	Create the System Baseline	772
19.4	Establish the Functional Baseline	795
19.5	Reach the Design-to Baseline	817
19.6	Set the Build-to Baseline	834
19.7	Achieve the As-built Baseline	856
Index		873
