DuPont™ Tyvek® Weatherization Systems

Wrapping a home or building in a weather-resistant barrier is not just good sense, it's good building practice.

DuPont™ Tyvek® acts like a windbreaker and wrapped over the sheathing and under the exterior siding—cut out around windows and doors and taped securely at the seams—resists air infiltration and water intrusion and makes for a more comfortable, energy-efficient home or building.

Prevents wind-driven rain and moisture penetration behind siding, which can saturate walls, creating a breeding ground for mold, mildew and wood rot.

Prevents air infiltrating from outside which can increase heating and cooling costs.

DuPont™ Tyvek®—the protective material with more than 30 years of performance in millions of homes. Whether you're building new, remodeling or re-siding, ask your Roofmart representative for the Tyvek® family of products.
