

Government Continuity of Operations

Are you confident that your program adequately supports your Mission Essential Functions? Are your program capabilities variable in response to different levels of disaster such as:

1. Localized short-term disruptions
2. Multi-day building wide outages, or
3. A permanent loss of a building or critical data?

Virtual Corporation is a continuity of operations consulting and software company that supports Local, State and Federal agencies and military commands with all aspects of their IT disaster recovery, continuity of government (COG) & continuity of operations (COOP) programs... big or small.

Disaster Recovery, Resilience, COG and COOP Software

Our web based Sustainable Planner® is a continuity of operations (COOP), COG, and IT disaster recovery planning system that empowers Local, State, Federal agencies and Department of Defense component managers to easily identify Mission Essential Functions (PMEFS, MEFs, etc.) & ensure that those functions are continued throughout or quickly resumed after a disruption of normal activities. SP can easily be configured to meet your agency's regulatory standards (FCD, FEMA, DoD, etc.).

Disaster Recovery, Resilience, COG & COOP Consulting

Virtual Corporation provides disaster recovery, continuity of government and continuity of operations planning consulting support tailored to government agencies and the Department of Defense requirements. Our highly knowledgeable continuity professionals use proven methods and decades of combined experience to deliver results that meet your agencies designated outcomes.

Continuity Program Maturity Modeling

The Business Continuity Maturity Model (BCMM) is a free, open access tool created to assist local, state and Federal agencies in assessing the effectiveness of your continuity program. FEMA, NIST, FCD 1 & 2 for Federal agencies and DoD 3020.26 and other regulations define the continuity program requirements. Use the BCMM to conduct objective, consistent and repeatable evaluation of your program's current state. Virtual also offers objective, 3rd party consulting to assess current state and document roadmap for future program state.
